PREFACE AND ACKNOWLEDGMENT

The Water Resources Survey, first sponsored in February, 1936 by the State Planning Commission and later jointly by the Commission and the Colorado Water Conservation Board, has compiled basic data which are being used to prepare a master report on the water resources of Colorado.

The work has been carried on with the aid of a Works Progress Administration Project under the direction of competent engineers and the general supervision of the Planning Commission, the Water Conservation Board and the State Engineer.

Basic data, too voluminous to be included in the master report, are published in the form of appendices as follows:

- Appendix No. 1 - Climatological Data of Colorado.
- Appendix No. 2 - Data on Stream Gaging Stations of Colorado.
- Appendix No. 3 - Stream Flow Data of Colorado.
- Appendix No. 4 - Canal Diversion Data of Colorado.
- Appendix No. 5 - Statistics of Irrigated Crops.

This appendix, published in five volumes, consists of statistics on irrigated crops for the counties and river basins in the state of Colorado. The data have been taken from the records of the Colorado Co-operative (State-Federal) Crop Reporting Service and from the United States Census of Agriculture.

Special acknowledgment is made to Mr. F. K. Reid and the staff of the Crop Reporting Service for their splendid help and co-operation, as well as to the Rio Grande Joint Investigation, National Resources Committee and the United States Bureau of Reclamation, whose land classification data were used.

STATE OF COLORADO
INCLUDING ALL RIVER BASINS

INTRODUCTION

INTRODUCTION

This is one of five volumes or parts of Appendix No. 5, giving Statistics of Irrigated Crops in Colorado. The five volumes are as follows:

- Vol. I State Summaries and Maps.
- Vol. II North Platte, South Platte, and Republican-Smoky Hill River Basins.
- Vol. III Arkansas River Basin.
- Vol. IV Rio Grande Basin.
- Vol. V San Juan, Colorado and Green River Basins.

The data contained in these volumes were compiled by the Water Resources Survey, chiefly, to furnish information from which to estimate the difference in returns obtained from crops grown under a controlled and adequate water supply and those grown under less favorable water supply conditions; and, to furnish the foundation for studies of the possibilities of increasing the crop returns from land (assuming a supplemental water supply) by more intensive cultivation and the growing of higher types of crops, as is now practiced in the better areas.

These studies, combined with studies in the same areas of water supplies available for the crops grown, give a basis for valuation of the present water supplies and of new or supplemental supplies which might be developed.

EXPLANATION OF DETAILED TABLES

In this volume are presented certain basic figures pertaining to the principal acreage, production and unit yields of the principal irrigated crops in each county and basin, and in the State of Colorado as a whole. The period of record chosen for the study was from 1923 to 1936, inclusive. Crops selected as principal were those whose mean annual value in individual counties was significantly greater than \$3,000 or more in the larger producing counties and a somewhat lesser amount in counties whose mean annual value of irrigated crops was comparatively low. By this procedure 95 per cent or more of the crop value reported for harvested irrigated crop lands in each county and basin was included. A summary of the values and acreage so obtained is shown by basins in the following table:

MEAN ANNUAL VALUE AND ACREAGE OF HARVESTED IRRIGATED CROPS
RIVER BASINS OF COLORADO, 1923-1936

River Basin	Mean Annual Value	Per Cent of State Value	Mean Annual Acreage	Per Cent of State Acreage
<u>SOUTH PLATTE</u>	\$28,622,123	41.26	864,454	30.14
<u>COLORADO</u>	12,980,879	20.00	490,151	16.67
<u>ARKANSAS</u>	11,264,269	17.33	405,480	14.00
<u>RIO GRANDE</u>	3,539,151	13.16	338,463	11.57
<u>GREEN</u>	1,421,022	2.19	93,139	3.19
<u>SAN JUAN</u>	1,097,494	1.69	64,974	2.24
<u>NORTH PLATTE</u>	813,965	1.25	90,189	3.09
<u>REPUBLICAN-SMOKY HILL</u>	159,495	0.50	12,574	0.94
<u>STATE</u>	\$64,908,398	100.00	2,327,491	100.00

It will be noted that the South Platte basin has a larger value than any other basin, in that 57 per cent of the average production or per cent of the total value of harvested irrigated crops.

All basic data were taken from the reports of the Colorado Co-operative Crop Reporting Service, which is composed of the United States Department of Agriculture-Bureau of Agricultural Economics, and the Colorado State Planning Commission-Division of Statistics. Supplementary data were taken from the Colorado Year Books and the publications of the U. S. Census of Agriculture.

Harvested acreage figures used in the report are based largely on the Federal Census enumerations for the years 1924, 1929 and 1934. For other years in the period, 1923 to 1936, inclusive, harvested acreage data, taken from reports of the Crop Reporting Service, are based to a considerable extent on the annual enumerations of crop statistics made by assessors as required by statute. Such enumerations are somewhat incomplete, but, after adjustments were made by the crop statisticians, it is believed that they are reasonably accurate and that trends revealed by them are significant. (See map inside back cover for irrigated lands of the State.)

Acreages of fruit land are not reported except in the Census years, 1929 and 1934, though the State Tax Commission does report the acreage of assessed fruit land each year for some counties. For the counties where the Tax Commission figures were available they were compared with the 1929 and 1934 figures of the Census of Agriculture, and for the purposes of this study, estimates for the years 1923 to 1928, 1930 to 1933 and 1935 to 1936 were made.

The annual value of fruit shown for each county is the estimated value of the fruit produced, as published by the Crop Reporting Service. The value of fruit, as used in this study, is not based on the average State unit price for the period 1923 to 1936, as the acreage for each kind of fruit is not available, and proportions of small fruit harvested vary considerably from year to year. However, the estimates described above give a fairly good basis for determining the mean annual value of fruit production per acre for the period.

In counties where Tax Commission figures have not been reported, yearly estimates of fruit acreage were not included, but the Federal Census figures for acreage in 1929 and 1934 have been shown at the bottom of Table I, together with figures of values for 1929 and 1934, and the mean annual value of all fruit products reported by the Crop Reporting Service for the period 1923 to 1936. Those interested in this phase of agriculture may make their own deductions of mean acreage and values per acre from the basic data shown.

For most of the seed crops, acreage and production figures were not available and for that reason they have not been included in this publication. However, such crops are sources of large income for many of the farmers in the lower South Platte and Arkansas River basins as well as other somewhat restricted areas.

Since acreage figures as well as price data were available for cucumber and alfalfa seed, these two crops have been included for all significant counties.

Data on yields per acre are based largely on reports of the corps of crop correspondents maintained throughout the State by the Crop Reporting Service. Total production figures in each county are obtained by multiplying the estimated acreage figures explained above by these established yields.

Unit values for individual crops are obtained through reports of price correspondents who cover each county of the State. These reports reflect the changes which occur from year to year because of distance from market, transportation facilities and local conditions which affect prices, these changes not necessarily being the same in adjacent counties or basins. The average State prices of individual crops in each year of the period, 1923 to 1936, are shown in the table and graphs on pages xiv to xix. All crops under one general-type classification are shown on the same graph. For this study the effect of these fluctuating price conditions was eliminated to facilitate the determination of the value of

irrigation water. Mean State unit prices for each crop, except fruit crops, were determined for the period 1923 to 1936, and these prices were applied uniformly in each year and in each county of the state during that period. (See column 17, page iv.) Annual values were determined by multiplying the mean State unit prices for individual crops by the production harvested in each year.

With the exception of fruit crops, all graphs appearing in the volume, depicting the trend of crop values in each county during the period 1923 to 1936, are based on the actual harvested acreages and production therefrom, multiplied by the mean State unit prices discussed above, rather than on actual prices which maintained in each county from year to year. Thus, the price element was held constant.

No claim is made for absolute accuracy of the acreage, yield or price data, though it is believed that these data are reasonably accurate and satisfactory for the purpose of this report. The fact that acreage and yield figures were collected currently at a time when knowledge of them was most definite renders the series of data used the best information available on the subjects concerned. Figures used for obtaining the mean State unit prices were also collected currently.

Annual figures of the Crop Reporting Service for hay crops were revised to conform to the acreages reported by the Census of Agriculture in the years 1924 and 1934, so that the data would be consistent throughout. Such revisions of alfalfa and wild hay, before 1927, were made by the Water Resources Survey, and from 1927 to 1936, inclusive, by the Crop Reporting Service. Where significant acreages of alfalfa seed were reported for any county, such acreages were deducted from total alfalfa hay, as reported by the Crop Reporting Service, and the proper unit prices were applied respectively to the remaining acreage of alfalfa hay and to the acreage of alfalfa seed. Acreages of tame hay, other than alfalfa, have been revised for the entire period, 1923 to 1936, by the Water Resources Survey for use in this report.

Particularly in the plains region a large portion of the forage crops is harvested from non-irrigated lands. Since the 1929 Census year was the only one of the

period for which a segregation of irrigated and non-irrigated hay crops was available, it was necessary in the dry land counties to estimate the acreage of wild hay and tame hay, other than alfalfa, which might be considered as irrigated. It was assumed that all alfalfa and in general that all wild hay is irrigated, either directly, or indirectly by sub-surface water, springs, meadow-seepage, etc. The 1929 Census and all other available data were used in making the separations.

In Table II, for the State as a whole, a large part of the effect on value of yearly changes in acreage has been eliminated by assuming that the mean acreage, 1923 to 1936, of each crop was grown each year. This is referred to herein as "Mean Acreage Basis ". Production figures in the table were arrived at by multiplying the mean harvested acreage by the established yields in Table I. By applying the State unit price to these production figures, the effect of price fluctuations due to market conditions was overcome. With the price and acreage variables removed, the principal cause of change in value of any crop from year to year will be the amount of irrigation water applied to that crop. (Naturally the effect of climatic conditions, frost, pests, etc. cannot be determined or eliminated.)

A recent publication of the Crop Reporting Service "Colorado Agricultural Statistics, 1937", incorporated historical county summaries of harvested acreages as well as yields per acre of irrigated crops. Certain revisions included therein were not available to the Water Resources Survey at the time this study was being made. Harvested acreages used herein are not, therefore, in perfect agreement with the figures included in the recent report of the Crop Reporting Service. The differences in general are small and are not considered significant as regards the effect on this report.

Taking value as a standard of comparison, principal crops of the State in the order of their importance, are: Sugar beets, alfalfa, potatoes, truck (cantaloupes

and honey-dews, lettuce, dry onions, green peas for market, tomatoes for market, cabbage, cauliflower, celery, snap beans, cucumbers, tomatoes for manufacturing, green peas for manufacturing and watermelons), wheat, fruit, wild hay, corn, barley, other tame hay, dry beans, oats, field peas and seed (cucumber and alfalfa).

The basins in order of importance, with respect to the value of irrigated crops, are: South Platte, Colorado, Arkansas, Rio Grande, Green, San Juan, North Platte and Republican-Smoky Hill. The counties in order of importance, are: Weld, Rio Grande, Mesa, Larimer, Morgan, Otero, Montrose, Delta, Logan, Pueblo, Adams, Garfield, Boulder, Saguache, Conejos, Prowers, Bent, Alamosa, Crowley, Jefferson, Costilla, Jackson, Sledge, Fremont, Routt, Eagle, Montezuma, La Plata, Las Animas, Rio Blanco, Gunnison, Arapahoe, Grand, Custer, Chaffee, Pitkin, Huerfano, Moffat, Park, Washington, Archuleta, Ouray, San Miguel, El Paso, Elbert, Douglas, Yuma, Teller, Lincoln, Summit, Lake, Mineral, Baca, Kit Carson, Mineral, Gilpin, Kiowa, Dolores, Cheyenne and Clear Creek.

Fruit crops show the highest return per acre. Only 1.08 per cent of the land is devoted to crops of this type, yet the value is 5.51 per cent of the total gross crop value for the State, giving a ratio of 1 to 5.10. Similar ratios for other types are: Truck crops, 1 to 4.76; row crops, 1 to 3.19; seed crops, 1 to 1.37; cereal crops, 1 to 0.71; and forage crops, 1 to 0.49. Truck and row crops combined make up only 13.53 per cent of the acreage of crops covered by this report, yet these two types together produce 46.53 per cent of the total value of all irrigated crops harvested.

A picture of the relative importance of each of these crops and of general crop types may be gained by inspection of Plates I, II and III inside the back cover. On these plates are shown the value and acreage of all harvested irrigated crops, as contained in the tables of this publication, both by counties and by basins. The individual crops and types are grouped as in Table I and Table IV, and crops of one general type are shown in similar hatching. Thus, all cereal crops are shown by different types of lines; all forage crops by different types of open squares and different row crops by closed squares.

Graphs similar to the maps explained above, but for the State as a whole, may be found on the following two pages. On page x, acreage and value are shown in actual dollar and acre-units; on page xi, these two quantities are both shown in per cent, so that they may be compared in like units.

The importance of individual crops by crop types in the various basins is also shown on pages xii and xiii. This table presents the value-per-acre of each individual crop and crops grouped by types, for each of the eight basins and shows the rank of the crop or group, in that basin, relative to the other basins in the State.

A key to all titles of tables and graphs contained in the index and in the body of this report is shown on the page preceding the index. This key gives the title and the corresponding number of each of the seven standard tables used in this publication. By referring to the key for the title and table number, and to the index for the page number, any table in the volume may readily be found.

1937 based on harvested irrigated acreage reported. (See Introduction.)

Row Crops: Potatoes and Sugar Beets. Cereal Crops: Corn, Wheat, Oats, Barley and

Hay. Forage Crops: Alfalfa, Other Trade Hay, Wild Hay and Field Peas.

Truck Crops: Celery, Tomatoes (Wt.), Culliflower, Dry Onions, Cabbage, Cauliflower

and Green Beans, Green Beans (Wt.), Green Peas (Wt.), Tomatoes (Dry), Cucumbers,

and Green Peas (Wt.). Fruit Crops: Apples, Apricots, Cherries, Lemons,

and Peaches, Grapes, Quinces, Currants, Raspberries and Blackberries.

Seed Crops: Alfalfa, Clover, and other seed crops.

HARVESTED ACREAGE OF IRRIGATED CROPS

COUNTIES OF COLORADO, 1923 — 1936

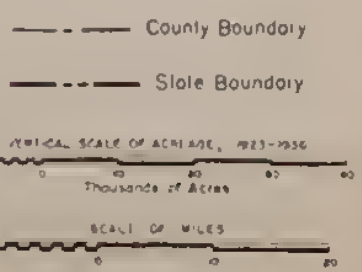

LEGEND

- SEED CROPS
(Alfalfa and cucumber only)
- FRUIT CROPS
(See "A")
- TRUCK CROPS
(See "D")
- CEREAL CROPS
 - Coin
 - Wheat
 - Oats
 - Barley
 - Dry Beans
- FORAGE CROPS
 - Alfalfa
 - Other Tame Hay
 - Wild Hay
 - Field Peas
- ROW CROPS
 - Potatoes
 - Sugar Beets

*-Omitted in South Platte River basin and in miscellaneous counties. See Table I of each county for acreage of fruit crops including those omitted on this map. See also Introductions in Volumes II to V, Statistics of Irrigated Crops.

*-For detail of crops included, see Table I or II for each county, Volumes II to V, Statistics of Irrigated Crops.

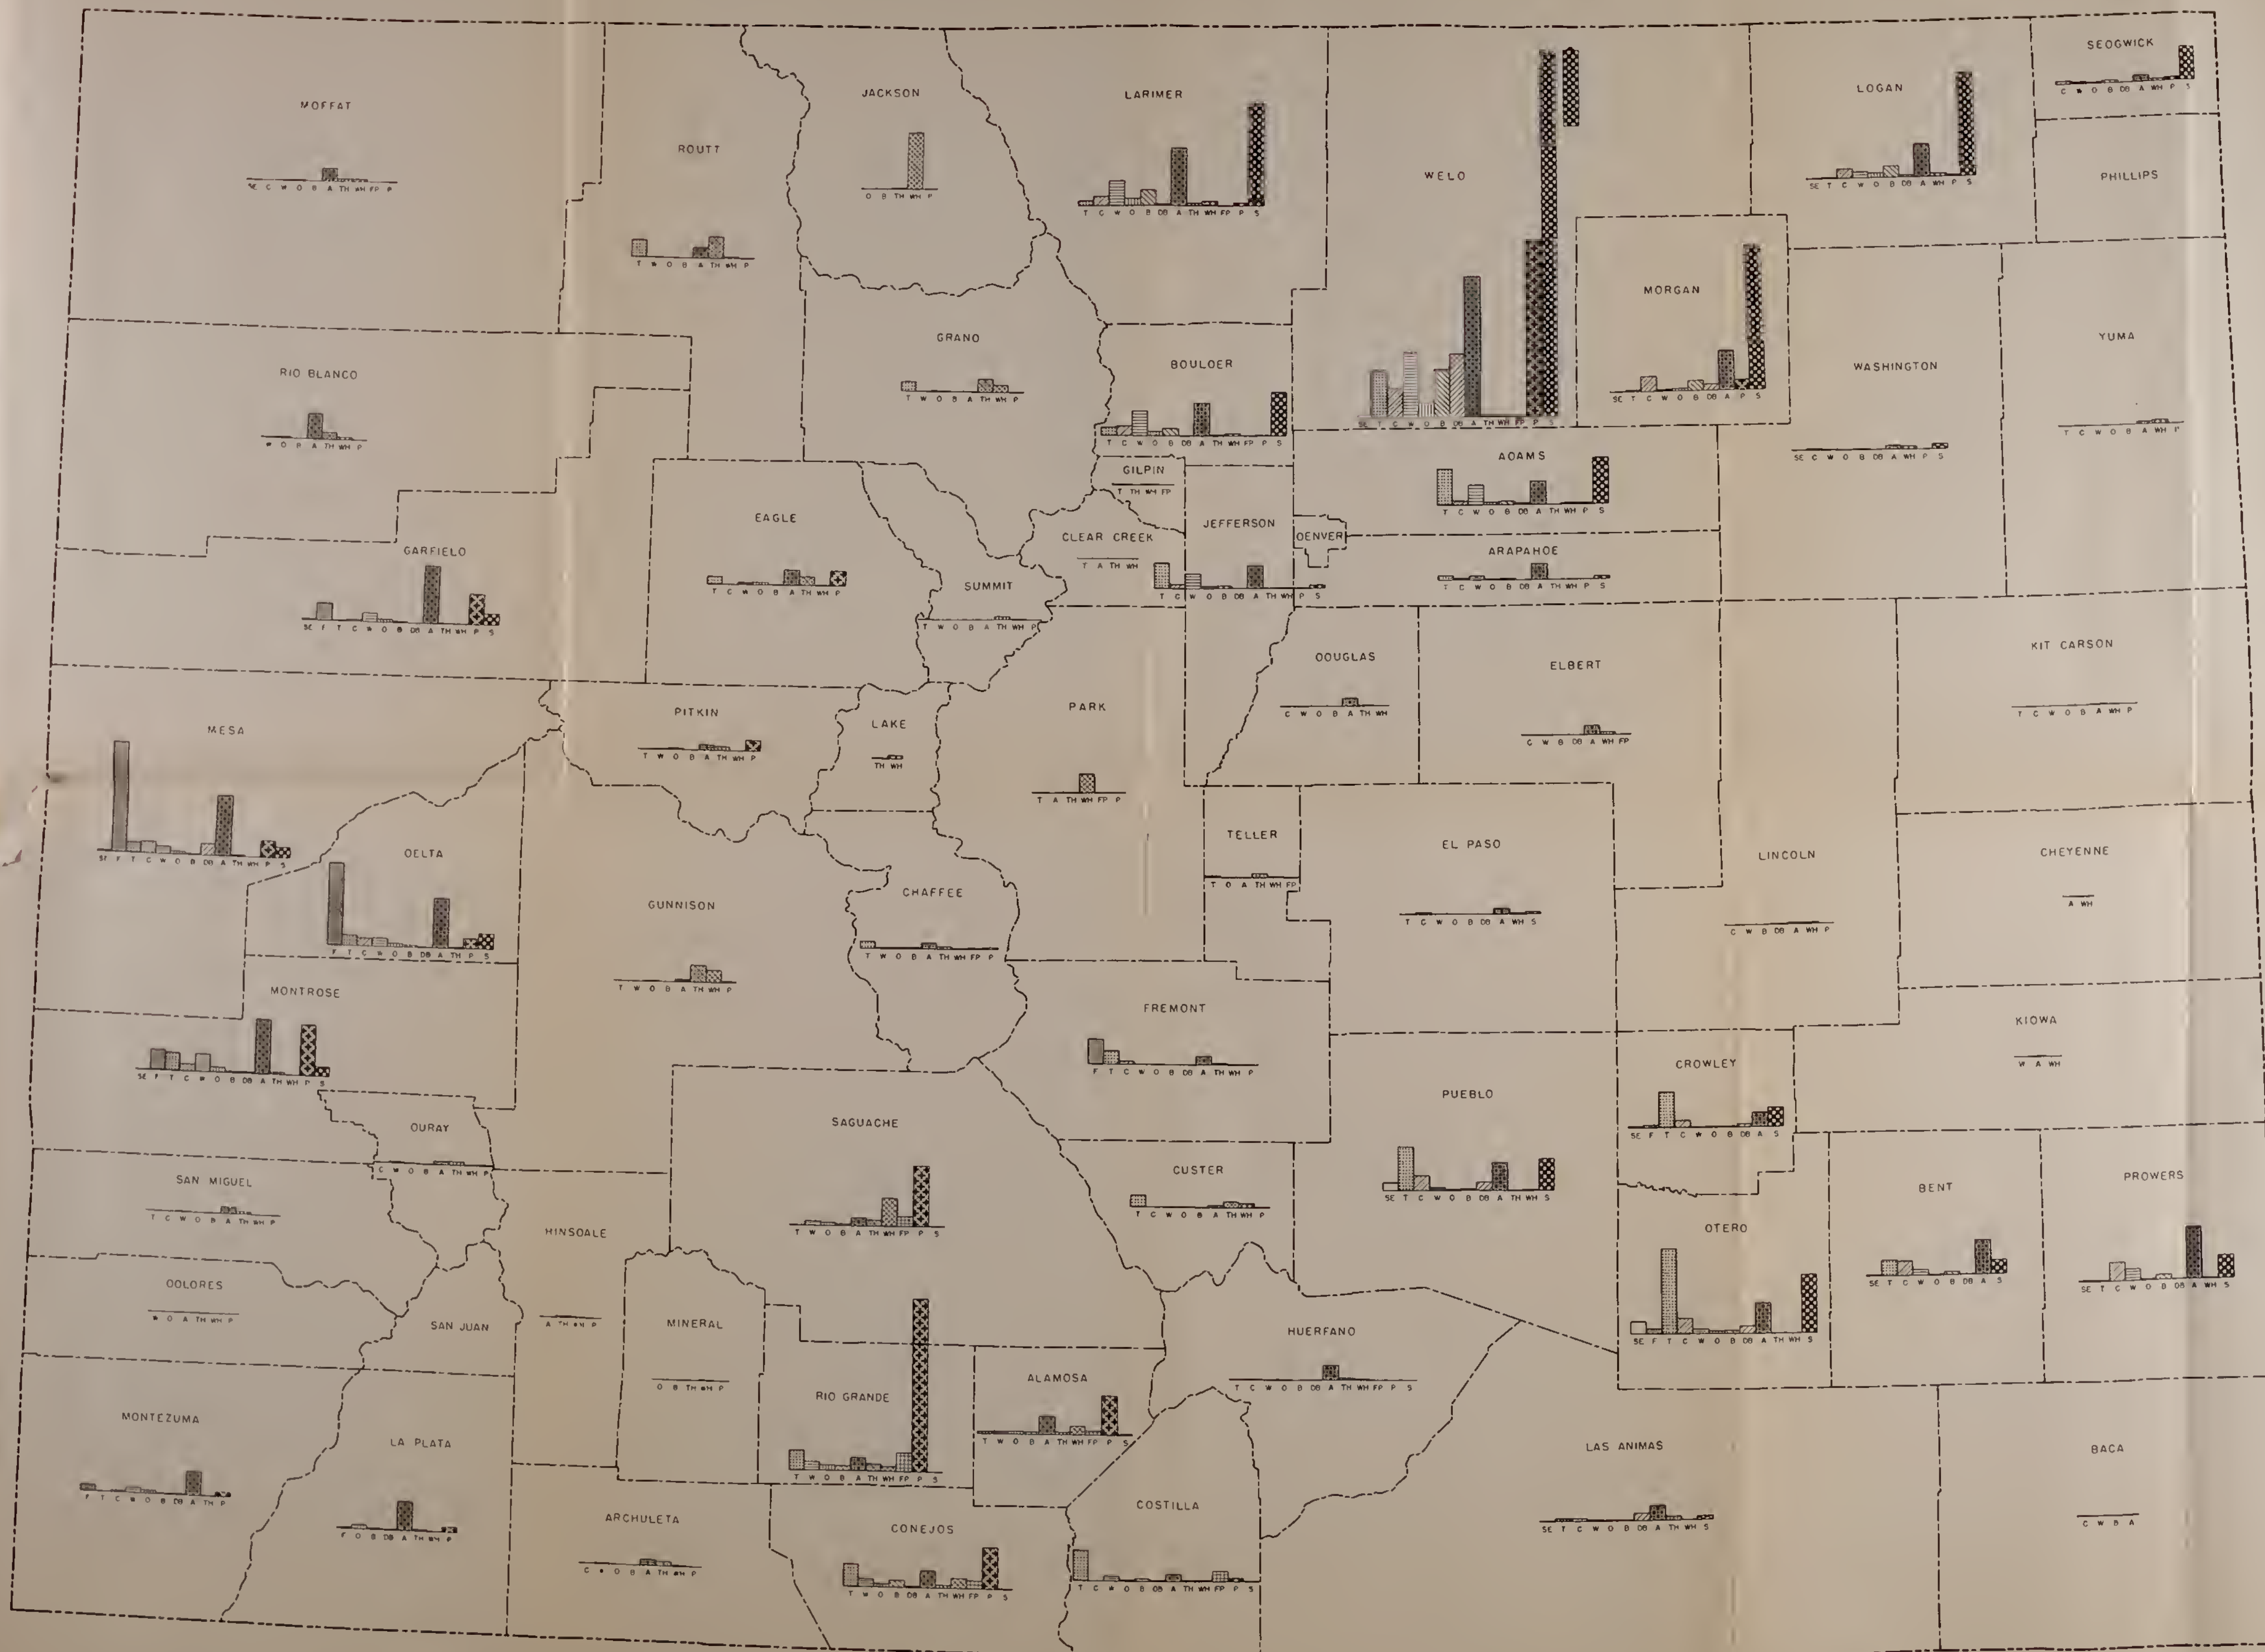

NOTE: All irrigated crops for San Juan County included with La Plata County, as in the publications of the Crop Reporting Service. No irrigated crops are reported for Phillips and Denver Counties.

VALUE OF HARVESTED IRRIGATED CROPS

COUNTIES OF COLORADO, 1923 — 1936

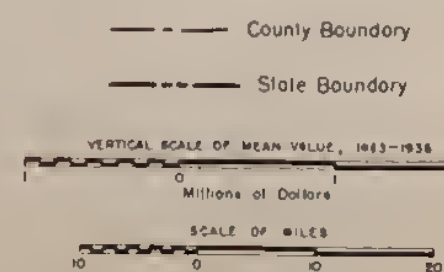

LEGEND

- SEED CROPS
(Alfalfa and cucumber only)
- FRUIT CROPS
(See "A")
- TRUCK CROPS
(See "B")
- CEREAL CROPS
 - Corn
 - Wheat
 - Oats
 - Barley
 - Dry Beans
- FORAGE CROPS
 - Alfalfa
 - Other Tame Hay
 - Wild Hay
- ROW CROPS
 - Potatoes
 - Sugar Beets

*A—Omitted in South Platte River basin and in miscellaneous counties. See Table I of each county for annual value of fruit crops including those omitted on this map. See also Introductions in Volumes II to V, Statistics of Irrigated Crops.

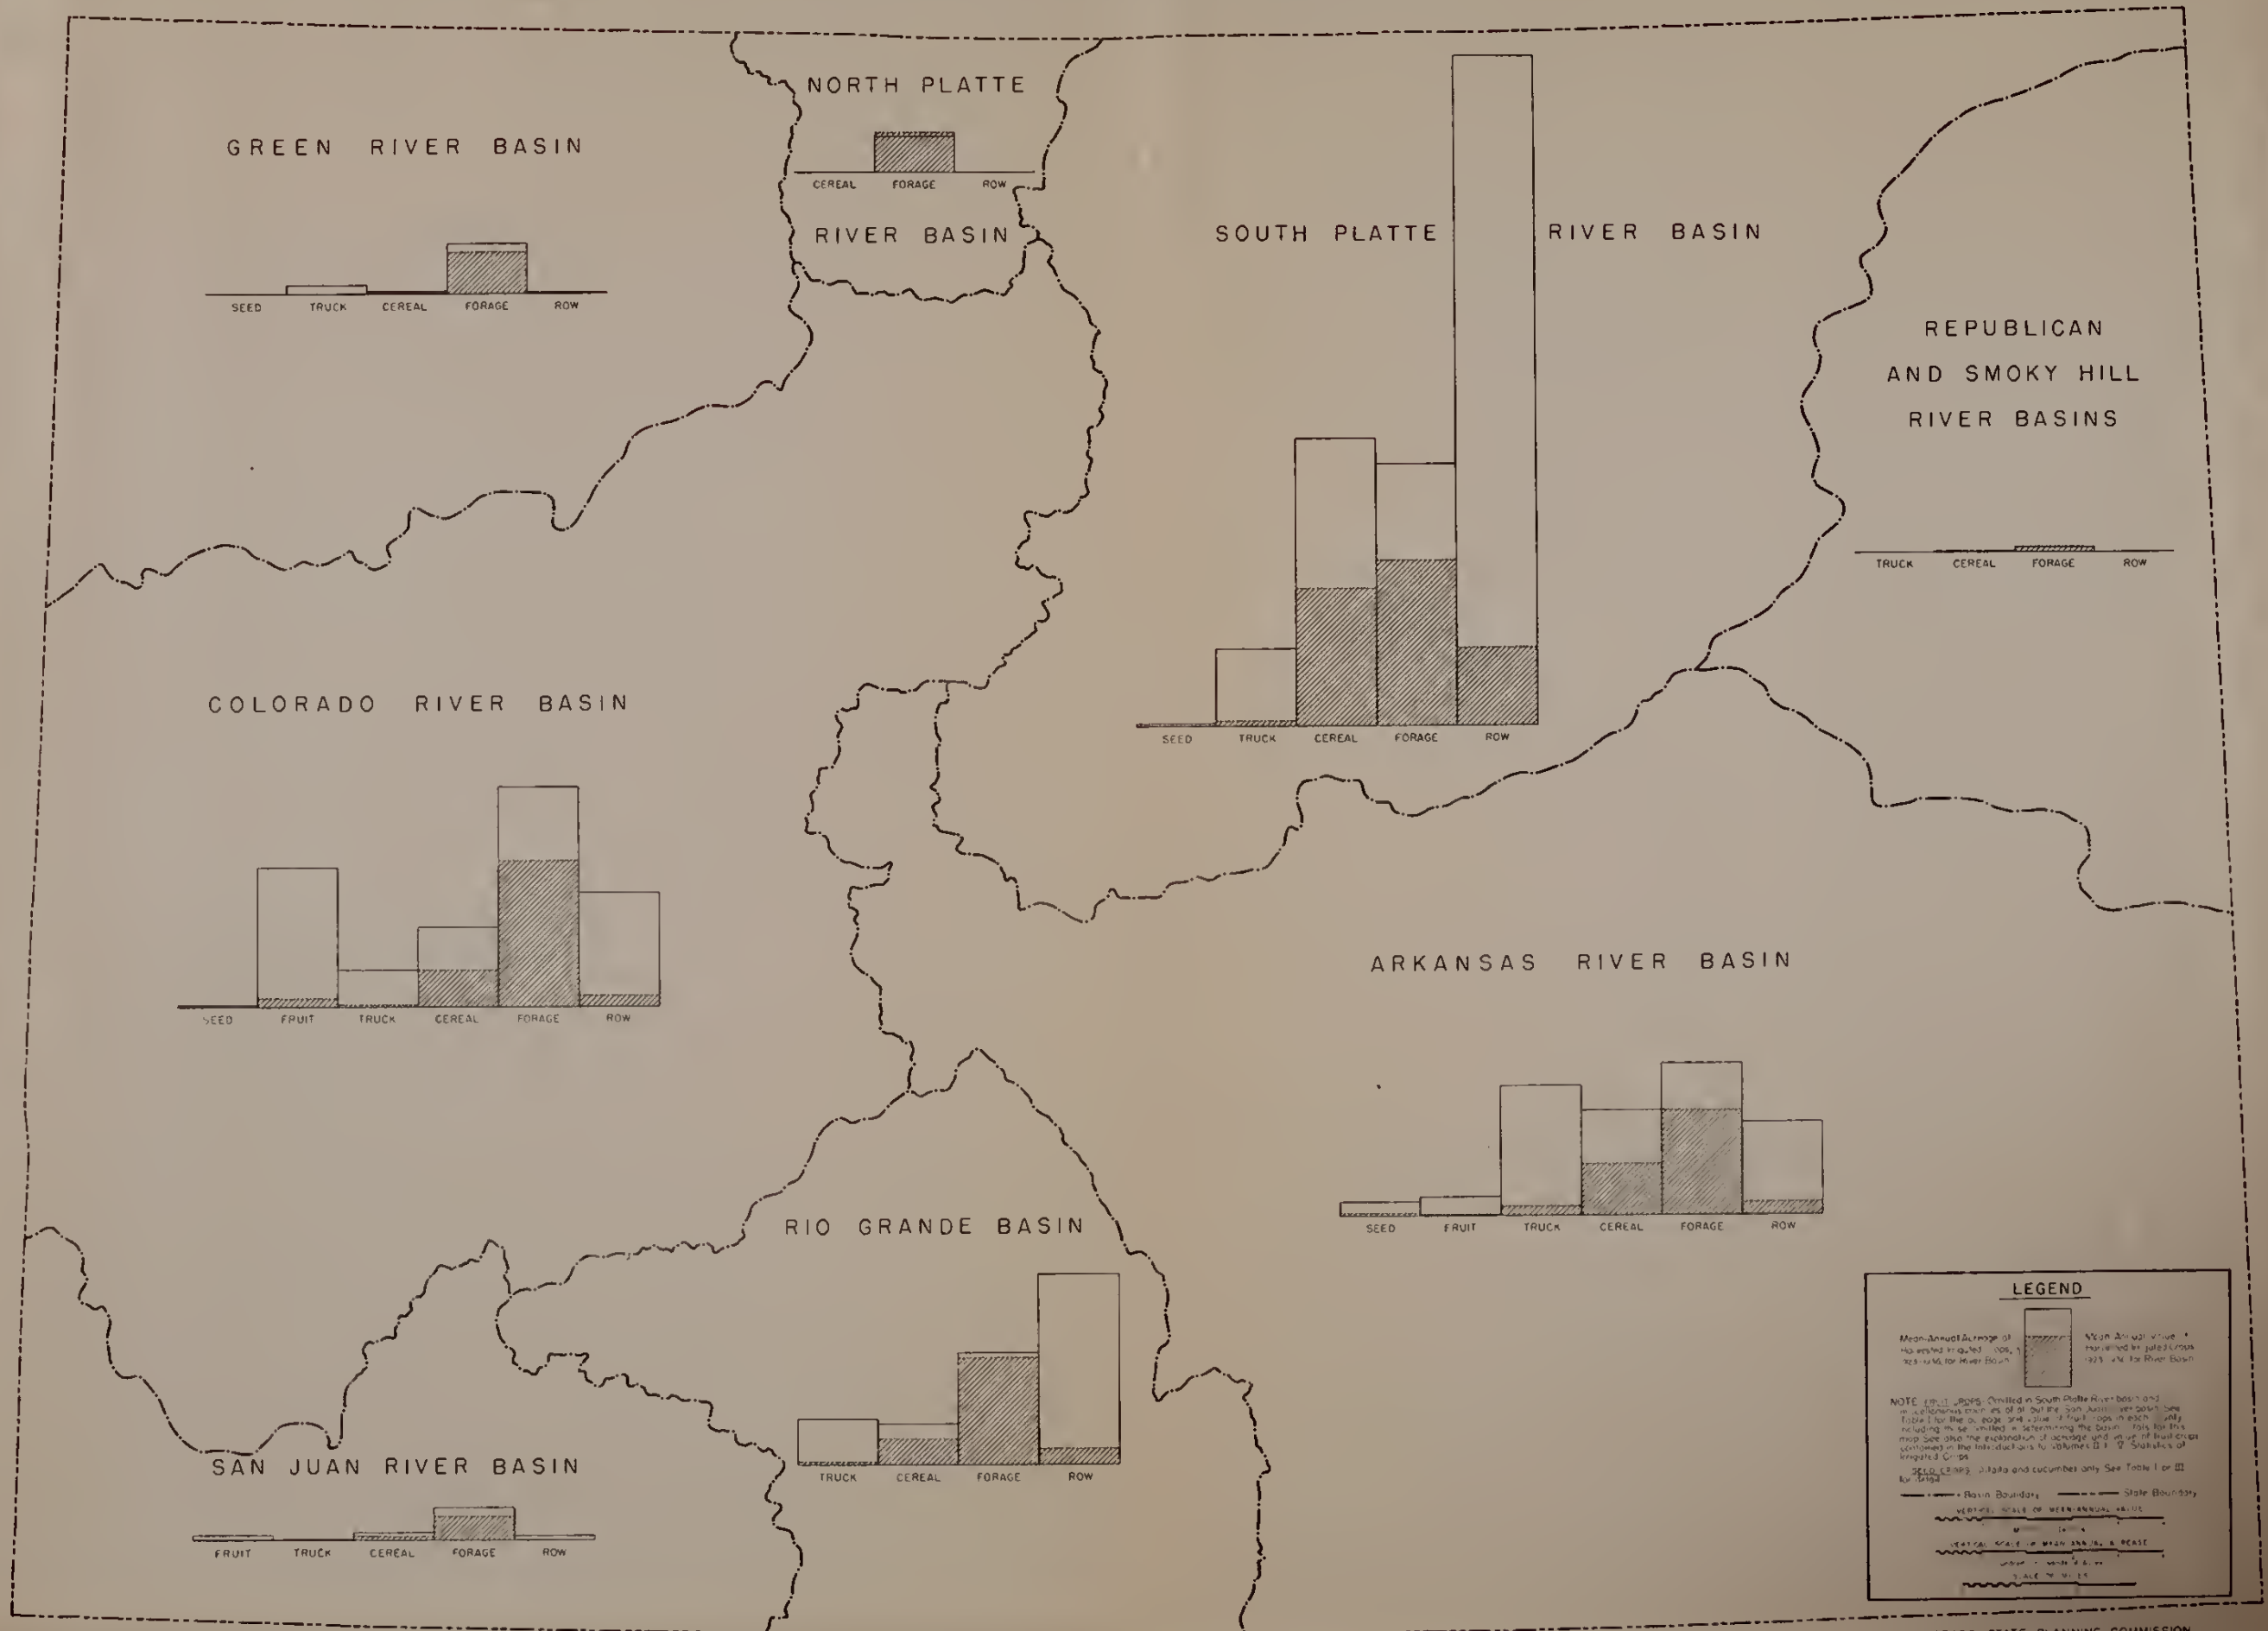

*B—For detail of crops included, see Table I or II for each county, Volumes II to V, Statistics of Irrigated Crops.

NOTE: All irrigated crops for San Juan County included with La Plata County, as in the publications of the Crop Reporting Service. No irrigated crops are reported for Phillips and Denver Counties.

VALUE AND ACREAGE OF IRRIGATED CROPS

RIVER BASINS OF COLORADO, 1923 — 1936

IRRIGATED AREAS IN COLORADO

LEGEND

- Irrigated Area
- Existing Reservoir
- Continental Divide
- County Line
- Lake
- Basin Boundary
- Town or City

NOTE: Information regarding irrigated areas was taken from the following sources: North Platte River—Colorado Water Conservation Board; Larimer, South Platte, and Arkansas Rivers—State Engineer; and general maps; Rio Grande—National Resources Committee, Rio Grande Joint Investigation land classification, 1936-1937; San Juan, Colorado, Timpah, and North Fork Republican Rivers areas—U.S. Bureau of Reclamation land classification, 1936-1938 (areas are subject to minor revisions and additions).
